I have created my own authentication class. I would like to use the Auth::attempt() method in my custom class. Is there an easy way to do this? A: Laravel's Auth class extends the Illuminate\Foundation\Auth\Authenticatable class. The Authenticatable class extends the Illuminate\Auth\UserContract interface. Auth implements the UserInterface and UserProviderInterface interfaces. This means that Auth has all of the methods and properties of these interfaces and can be used as a replacement for these. Quality of life of families with the diagnosis of depression: a comparison with schizophrenia. The purpose of this study was to compare the quality of life of families with a diagnosis of schizophrenia with that of families with the diagnosis of depression. Quality of life in patients and their families was assessed in an outpatient clinical population and compared with that of healthy community controls. Quality of life was assessed using the Quality of Life Questionnaire, which was mailed to 115 randomly selected families with a member who had been diagnosed as having schizophrenia or depression. A total of 48 schizophrenia families and 37 depression families participated. Families with a diagnosis of depression reported significantly

poorer overall quality of life than families with a diagnosis of schizophrenia. The affective-cognitive and somatic subscales of the quality of life questionnaire were significantly poorer in the depression group. Depressive symptomatology was associated with significantly poorer quality of life in families with a diagnosis of depression. Health care professionals need to be aware of the problems encountered by families with a member who has a diagnosis of depression.Q: Compare current time with a timestamp and set the state accordingly In my react component, I want to compare the current time with the timestamp of the db to see if it has been less than 10 minutes.
